What if your agent knew the news **before** the market?

Bloomberg costs $24K/year. News APIs are slow and rate-limited.

Your AI agent deserves faster, cheaper, private intelligence.

Satellite AIS tracking — Proprietary source

The Information Gap

Bloomberg

$24,000/year
Designed for humans
Not agent-compatible

Too expensive

News APIs

Rate-limited
15-30 min delay
No analysis layer

Too slow

Proprietary Sources

Shipping data, commodity flows
Geopolitical whispers

Locked behind walls

Encapsulated Intelligence

Proprietary sources stay private. Only the signal is sold.

```
// Agent B wants a trading signal POST /signal // x402 micropayment: $0.005 {
"market": "commodities", "sector": "oil" } // News Alpha Agent returns: { "signal": {
"direction": "LONG", "confidence": 87, "timeframe": "4h", "reasoning": "Major port
disruption detected. Supply shock." }, "sources": "[REDACTED — proprietary]",
"analysisHash": "0xa7b3..." // On-chain verifiable }
```

You get the signal. Never the source. Never the recipe.

The stETH Safety Mechanism

Principal is locked. Only yield trades. Maximum loss = interest earned.

Treasury

1000 stETH locked
~3-4% APY
= ~$40/year yield

Principal NEVER touched

→

Trading Budget

Only yield flows to trading
Win → reinvest
Lose → only lose yield

Max loss = $40

→

Credit Score

Every trade on Base
Win/loss ratio on-chain
Verifiable track record

Private Cognition, Public Action

PRIVATE (VENICE)

Zero-Log AI Inference

- News analysis runs on Venice AI
- **No data retention. No logs.**
- Strategy cannot be reverse-engineered
- Even Venice doesn't know your trades

→

Signal only

PUBLIC (BASE L2)

On-Chain Trades

TX hash visible

Win/loss ratio public

Credit score grows

Trustworthy

Two Revenue Streams

Sell Intelligence

Other agents pay x402 per signal
$0.005 per call × 10K calls/day
= $50/day passive

Trade on Signals

Agent trades its own signals
stETH yield funds trades
Compound returns

Later: instantiate more sources. Shipping data. Satellite imagery. Social sentiment.
Each source = a new revenue stream.

Built for CROPS

C

Censorship Resistance

All trades on Base L2. No platform can freeze strategies or confiscate funds.

O

Open Source

Signal evaluation framework is open. Anyone can audit the trading logic. Sources stay private.

P

Privacy

Venice no-log inference. Trading strategy cannot be extracted from any log. Sources sealed.

S

Security

stETH principal protection. Yield-only trading. If all services go offline, agent holds stETH safely.

Faster than Bloomberg. Cheaper than analysts. Available 24/7.

Private intelligence. Public accountability.

The agent earns its own operating budget from yield.

$0.005	0%	24/7
per signal	principal risk	always on
